
Environmental and Quality Policy

Caybeach is an organisation that has five non-hotel resorts, all of which are focused on quality, continuous improvement of the effectiveness of their management and the creation of a qualified team of people which exceeds the expectations of its customers. The order to do this it has a work systems based on the requirements of the ISO 9001:2008 Quality Management Standard as an international reference of business excellence.

Furthermore, Caybeach is aware of the impact that the activity of its non-hotel resorts has on the environment and therefore has developed an environmental management system according to the requirements of the ISO 14001:2004 International Standard that enables control and improvement measurements to be continually established on each of its aspects: monitoring of electricity consumption making use of solar panels, water consumption monitoring systems, optimisation of cleaning products, purchasing products environmentally friendly, control and prevention of possible environmental emergency situations, etc.

Caybeach is strongly committed to the pollution prevention with the continuous improvement and the fulfilment of all the applicable legal requirements and many others that the organisation may set with third parties. Caybeach wants to go beyond this and involve the subcontractors with which it works into its management, as well as providing its customers participation tools, through information, recycling centres and any other activity that may be considered environmentally beneficial.

This Policy is continually reviewed by the company management, who, after approving it, wish to make it public as a proof of commitment.
